Accessibility Evaluation Report: Agoda Website

[Download Report \(HTML\)](#)[Download Report \(JSON\)](#)

About the Evaluation

Report Creator : **Yung-Ching, Yang**Evaluation Commissioner : **Dr . John Neumann**Evaluation date : **Mon Nov 03 2025**[Edit](#)

Executive Summary

Overall, Agoda demonstrates strong adherence to accessibility standards despite its large volume of content. Most key accessibility principles are followed consistently across pages. However, several areas could benefit from improvement:

1. Color contrast: Certain icons and graphical elements have insufficient contrast, which may reduce visibility for users with low vision.
2. Alternative text: While images include alt attributes, some descriptions are too general and should be made more specific to convey the image's purpose accurately.
3. Keyboard accessibility: The site's keyboard navigation is relatively limited. Some interactive elements are difficult to reach or operate using only the keyboard, which can affect users who rely on non-mouse input.
4. Resize text: When zoomed to 200% or higher, some content becomes truncated or overlaps, indicating that text resizing is not fully supported without loss of information or functionality.

In summary, while Agoda meets most WCAG success criteria, enhancing these details —particularly in color contrast, alt text quality, keyboard mobility, and text resizing— would further improve the overall accessibility and inclusiveness of the site.

1.1 Text Alternatives

Entire sample

Result: Passed

Home Page

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

Most non-text content on the site consists of images, all of which include alternative text (alt text).

Home Page

The homepage passes this criterion, as all images contain appropriate alt text. However, some images that function as links include alt text that may not clearly describe the link's purpose.

Search Result Page

All images have alt text present. However, several use generic descriptions that do not distinguish between different images. For example, the alt text "swimming pool" is used for multiple hotel images, which reduces the descriptive value for screen reader users.

Hotel Page

Most images include alt text, but a few embedded videos lack alt text or captions, which may limit accessibility for users with visual or hearing impairments.

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

Most visible links across Agoda's site include descriptive text (for example, "See all photos," "View this deal," "Read all reviews," or navigation labels like "Hotels & Homes," "Activities," and "Coupons & Deals"). Each link clearly indicates its destination or action. Therefore, the link purpose can be determined either from the link text itself or from surrounding context such as headings or card titles.

Home Page

Primary navigation links ("Hotels & Homes," "Transport," "Activities," etc.) and the main call-to-action button ("Search") have explicit, descriptive text that communicates their purpose.

Search Result Page

Links such as "See all coupons," property names ("Flamingo Las Vegas"), and "Search on map" are descriptive in context. Each link communicates its action or destination clearly, supporting quick understanding by screen-reader or keyboard users.

Hotel Page

Links like "See all photos," "View this deal," and "Read all reviews" include visible descriptive text and appear adjacent to hotel details, which provide additional context.

Hotel Page

Result: Passed

Entire sample

Observations:

Headings and labels are mostly descriptive and informative across Agoda's site. Each section (e.g., "Top destinations in the United States," "Sort by," "Highlights," "Facilities") clearly describes its purpose. Input fields, such as destination search and date pickers, have visible or programmatically linked labels.

Home Page

The main heading "See the World for Less" introduces the site's purpose, and sub-sections like "Top destinations in the United States" clearly identify the content below. Search fields include clear icons and contextual labels (destination, date, guests).

Search Result Page

Headings such as “Sort by,” “Popular filters for Las Vegas (NV),” and “Your budget (per night)” accurately reflect the purpose of each section. Filters and sliders are well-labeled.

Hotel Page

Section headings (“Overview,” “Rooms,” “Reviews,” “Facilities”) correspond to their respective content. Buttons like “View this deal” and “Read all reviews” describe clear actions.

Hotel Page

Result: Passed

Entire sample

Observations:

Agoda's interface uses consistent and descriptive visible text labels (e.g., "Search," "Sign in," "Filter," "View this deal"). Testing with accessibility tools shows that the accessible names generally include the same visible text.

Home Page

The main "Search" button, navigation menu links, and sign-in controls all share identical visible and accessible labels.

Search Result Page

Hotel listings use visible link text such as "View this deal" or property names, and these same phrases are included in their accessible names.

Hotel Page

Buttons like "See all photos," "Read all reviews," and "Book now" retain matching aria-labels or link text, ensuring accurate announcements.

Entire sample

Observations:

Across Agoda's desktop and mobile layouts, most buttons, icons, and links (e.g., "Search," "View this deal," filters, and map controls) meet or exceed the 24 × 24 pixel minimum. Interactive elements have sufficient spacing to prevent accidental taps.

Home Page

The main navigation items, search buttons, and input fields are large and well-spaced. Touch targets (e.g., "Search" button, date selector) exceed the minimum size.

Search Result Page

Hotel cards, sorting buttons, and filters provide large clickable areas. While some text links (e.g., "See all deals") are slightly smaller, their spacing prevents accidental activation.

Hotel Page

Buttons such as "View this deal," "Read all reviews," and navigation arrows for photo carousels meet the minimum size.

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

The default page language is programmatically determinable.

Home Page

The homepage specifies "en" as the language in the HTML element. Content is consistently in English, and assistive technologies correctly interpret it.

Search Result Page

The page also includes lang="en", ensuring that results, filters, and labels are read correctly by screen readers.

Hotel Page

The page language is declared as English and all content, including headings and descriptions, matches that language setting.

3.2 Predictable

Entire sample

Result: Passed

Home Page

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

No functions initiate a context change on focus alone.

Home Page

Tabbing through the search bar, date picker, and navigation menu does not automatically open or change pages. Interaction requires explicit user input (e.g., pressing Enter or clicking).

Search Result Page

Filters, sort options, and hotel links do not activate or reload when focused. A change occurs only when users intentionally select an option.

Hotel Page

Interactive elements like "View this deal" or "See all photos" remain inactive until clicked or pressed. Focus alone does not open new windows or alter the view.

 (<https://www.w3.org/WAI/eval/report-tool/evaluation/audit-sample#criterion-321>)

Entire sample

Result: Passed

Home Page

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

No automatic context changes occur upon user input; all updates require clear, intentional actions.

Home Page

Typing in the search bar or adjusting date/guest inputs does not automatically reload the page. The change applies only when the "Search" button is pressed.

Search Result Page

Filters and sorting options typically update results only after selection or confirmation. No full-page reloads or redirections happen automatically upon selecting an input.

Hotel Page

Changing the number of guests or dates does not trigger automatic redirection; updates happen only after clicking “Search” or similar buttons.

 (<https://www.w3.org/WAI/eval/report-tool/evaluation/audit-sample#criterion-322>)

Entire sample

Result: Passed

Home Page

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

Repeated navigation elements maintain consistent structure and order across pages, providing a predictable user experience.

Home Page

The primary navigation bar appears at the top of the page, followed by a search area and promotional content. This layout remains the same on all other pages

Search Result Page

The top navigation and footer remain identical to the home page. Additional content (filters, results) appears within the main area without changing the layout of shared elements.

Hotel Page

The same header and footer are used, with the same link order. Page-specific content (photos, reviews, etc.) is placed below, not affecting navigation consistency.

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

Components that perform the same function (e.g., “Search,” “View this deal,” “Sign in”) are consistently named and identified, supporting predictable user experiences.

Home Page

The “Search” button, main navigation bar, and user account controls use consistent labels that match their functions on all other pages.

Search Result Page

Buttons and links such as “View this deal,” “Sort by,” and “Filters” appear identical to those on other pages and perform the same actions.

Hotel Page

“View this deal,” “See all photos,” and “Read all reviews” labels retain the same visual style as used elsewhere on the site.

4 Robust

4.1 Compatible

Entire sample

Result: Passed

Home Page

Result: Passed

Search Result Page

Result: Passed

Hotel Page

Result: Passed

Entire sample

Observations:

All user interface components have accessible names, roles, and values that assistive technologies can detect and announce.

Home Page

Navigation elements (e.g., "Hotels & Homes," "Flights," "Activities") are coded as links or buttons with proper labels. The search bar and date selector fields have input roles and identifiable labels.

Search Result Page

Filter toggles, sorting buttons, and hotel cards include correct ARIA roles and names. Selected filters update their state programmatically (aria-selected, aria-checked).

Hotel Page

Buttons like "View this deal," "See all photos," and "Read all reviews" are properly coded as links or buttons with clear text labels. Expandable sections (e.g., amenities or room details) announce state changes when opened or closed.
